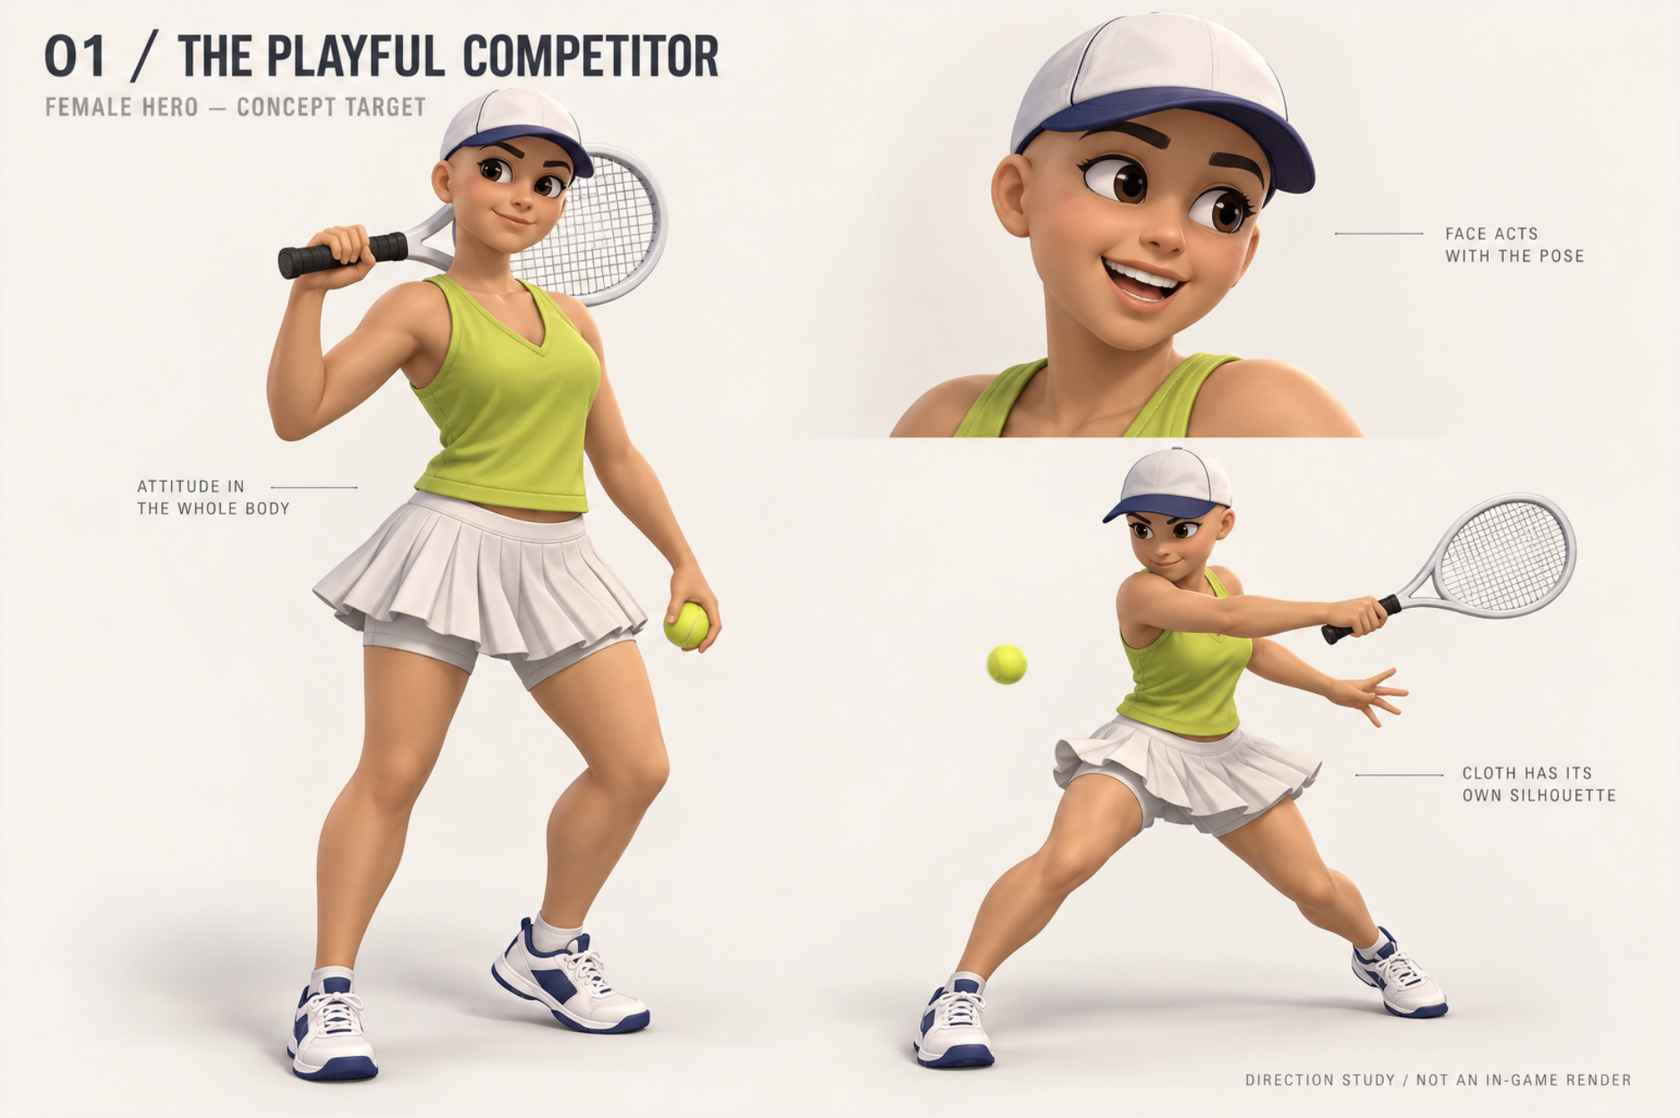
THE GOAL COMES FIRST

BRIGHT. LIVELY. SOULFUL.

A neutral construction baseline for a character with real personality.



ONE PORTABLE FILE

12 new sheets / 60 reference panels
3 expressive direction boards
Locked female identity plate
Full copyable master prompt

USE IN ANOTHER CHAT

Attach this PDF and ask the agent to read the master prompt and inspect every image. The embedded text files also preserve the exact handoff and generation prompts.

THE PRIORITY

Neutral poses aid construction. The expressive boards remain the ambition. A dull, blank character is a failure even if the mesh is technically tidy.

STATUS

Reference generation only.
Female hero only.
Game implementation awaits instruction.

FEMALE HERO: BRIGHT, LIVELY, SOULFUL

Copy this entire file into the next chat

This is the complete handoff for the female hero visual overhaul. The user's central instruction is: "make sure the characters look as bright, lively, and soulful as possible, thats the main thing we are going for."

1. The outcome that matters

Make her feel like a person players want to inhabit: bright, appealing, engaged, expressive and soulful. Preserve our recognizable adult stylized athlete. Learn from Nintendo's clarity and emotional readability and Fortnite's confident character forms; do not copy their designs. This is a SIGNIFICANT coordinated improvement, not another subtle breathing/blink layer.

Neutral does NOT mean lifeless. These A-pose sheets are a construction baseline, not the desired emotional state during play. Bright means clean readable color, open appealing facial forms, clear eyes and soft material response; it does not mean overexposing skin, adding a yellow tint, plastic gloss, or changing the world's lights. Soul comes from specific intentions, eye focus, expressive brows/lids/cheeks/mouth, asymmetry in acting, body weight, contextual reactions and recovery. The simplest default outfit must already feel good before skins are added.

2. Where everything is

Repository: /Users/adnanyonathan/Documents/Codex/2026-09-20/wh/outputs/iphone-golf-simulator

Reference pack: /Users/adnanyonathan/Documents/Codex/2026-09-20/wh/outputs/iphone-golf-simulator/ArtDir/style/alive/neutral-reference-pack-2026-10-15

Single portable document: /Users/adnanyonathan/Documents/Codex/2026-09-20/wh/outputs/iphone-golf-simulator/ArtDir/style/alive/neutral-reference-pack-2026-10-15/FEMALE_HERO_COMPLETE_REFERENCE.pdf

This copyable prompt: /Users/adnanyonathan/Documents/Codex/2026-09-20/wh/outputs/iphone-golf-simulator/ArtDir/style/alive/neutral-reference-pack-2026-10-15/START_HERE.md

If this repository is available, use the actual PNGs below. Open and visually inspect them; do not work from file names or summaries. If working elsewhere, use the attached PDF: it contains this brief, all reference sheets, the original three expressive boards, and the locked female body plate. Local paths are not transferable by copying text alone; attach that single PDF when the other chat has no access to this workspace.

3. Scope and authorization

Female hero only. Preserve the male hero. The work completed in the originating chat is REFERENCE GENERATION ONLY; no further game implementation was authorized. This handoff by itself is not approval to edit the game. If the user also says "proceed", "implement" or equivalent in the new chat, that authorizes the implementation phase within the boundaries below; do not ask for the same permission again.

Stage only, no commits. Preserve existing unrelated staged/unstaged changes. Read current AGENTS.md and applicable authority docs. Do not treat stale garment-only or no-animation historical notes as instructions to ignore a newly authorized expressive overhaul, but do preserve body/rig/face identity unless the user explicitly expands that scope.

4. Visual priority and resolving disagreements

A. MAIN GOAL: bright, lively, soulful and readable at phone distance. A technically tidy but bland result FAILS.

B. Existing locked female anatomy/identity and accepted rig are preserved. The generated images are approximations, not permission to enlarge eyes, shrink the jaw/waist, lengthen legs, alter age or replace the person.

C. Original expressive boards establish emotional appeal, broad material quality and performance range. The original clothes-with-weight board governs the substantial clothing quality.

D. Neutral sheet 01 governs tennis rest silhouette/construction; neutral sheet 03 governs golf. The front and rear are the principal anchors; side views cross-check depth.

E. Head sheets 07-08 support skin response, eyelid/lip/ear forms and cap construction. They do not override locked facial proportions. Maintain complete bald scalp, ears and neck under removable headwear.

F. Sheets 02,04-06,09-12 are supplementary angle/detail studies. If pleat count, seam placement, shoe panel, cap bill or perspective differs, reconcile to 01/03 and the same underlying 3D object. Never build different geometry per camera.

G. Generated angle labels describe intended views, not calibrated measurements. Elevated views have approximate perspective. Hidden garment backs and under-cap forms are design inferences. Never average conflicting images into a new identity.

H. The earlier exposed waist on expressive board 01 is incidental: neutral tops overlap the waistband. Reference colors illustrate the look; retain all customization and saved palette selections.

5. Reference map

All paths below are relative to the reference pack. Sheets contain 60 reference panels total, not 60 independently reconstructed or verified cameras.

01 sheets/01-tennis-cardinal-master.png - front, side, back, opposite side; primary tennis master.

02 sheets/02-tennis-obliques.png - four oblique directions; rear-angle duplicate corrected.

03 sheets/03-golf-cardinal-master.png - front, side, back, opposite side; primary golf master.

04 sheets/04-golf-obliques.png - four golf oblique directions.

05 sheets/05-tennis-elevation.png - front/back, high/low camera studies.

06 sheets/06-golf-elevation.png - front/back, high/low camera studies.

07 sheets/07-head-skin-neutral.png - six uncapped head/skin views.

08 sheets/08-head-cap-neutral.png - six capped face/head views.

09 sheets/09-tennis-top-construction.png - six rest torso/armhole/hem views.

10 sheets/10-golf-polo-construction.png - six rest torso/collar/sleeve views.

11 sheets/11-skorts-construction.png - six front/side/back skort views, tennis and golf.

12 sheets/12-hands-footwear.png - three hand and three footwear detail views.

S1 sources/01-playful-competitor.png - overall emotional and visual appeal.

S2 sources/02-acting-range.png - focus, triumph, disappointment, acknowledgment and invitation.

S3 sources/03-clothes-with-weight.png - substantial garment form and material quality.

S4 sources/female_body_plain.jpg - existing locked body/face identity plate, not a clothing target.

GENERATION_PROMPTS.json preserves exact generation inputs and revisions for reproducibility; reproduction is not guaranteed.

6. Build one neutral character that can act

Keep adult height approximately 1.65-1.75m, existing soft athletic proportions and humanoid rig/bind transforms. The depicted symmetric relaxed A-pose has arms roughly 25 degrees from vertical, level shoulders/pelvis, evenly planted feet, relaxed separated fingers, a neutral jaw and resting brows/lids. Do NOT rebind the accepted rig merely to mimic the illustrated pose; pose the rig for comparison instead.

Do not bake a smirk, squint, bent knee, tilted pelvis, twist, smile crease or action-cloth fold into the rest state. Preserve a complete usable body, separate garments and optional cap. Preserve existing animation sources and gameplay behavior. Any future facial controls should expand expression range without changing the neutral identity. The asset must support many emotes, not only the few pictured.

When authorized to implement, inspect the real rig/mesh/material capabilities first. Propose the smallest structural changes that can actually reach the large visual goal; additive micro-motion alone is insufficient. Do not silently replace the rig or regenerate the full character.

7. Materials and clothing: specific targets

Skin: warm and clean, softly matte/satin, readable cheek/nose/lip/ear planes, gentle local warmth, no dirty AO stains, flat grey cast, excessive orange/yellow, oily shine or pore noise. Keep sufficient separation of skin from fabric without changing identity. Eye focus and eyelid shapes matter more than giant catchlights.

Tennis top: lime technical-knit V-neck, thick bound neckline/armholes, visible athletic ease around lower ribs/waist, broad meaningful gravity folds, separate hem overlapping the waistband. No abdomen-contour shell.

Golf polo: coral matte knit, collar with stand and underside, layered two-button placket, rounded sleeves with cuff thickness and air gaps, loose torso ease, plain back and turned hem over waistband.

Skorts: ivory tennis/navy golf, broad grouped pleats with depth and real returns, substantial waistband/hem, opaque fitted liner shorts, independent cloth silhouette. No dense radial ribs, rigid cone or paper-thin sheet.

Footwear/cap: preserve recognizable simple shapes, distinct rubber/fabric response, substantial soles and brim, restrained seams. Keep cap separate. Golf glove can remain a separate accessory; absent in neutral masters to expose both hands.

Keep garment base color customizable. Geometry, neutral detail, roughness/normal response and deformation should carry the improvement in light, dark and saturated colors.

Approximate body triangle budget remains 35-50k unless otherwise approved; profile garment/face additions separately. Do not trade mobile readability for invisible texture detail. Avoid crunch compression that damages the face.

8. Acting: how neutral becomes soulful

Once authorized, use the expressive sheet as performance intent:

- Readiness: engaged eyes, quiet anticipation, athletic weight.

- Focus: eyes track the play; brow/lids and torso work together.

- Success: a clear release, weight transfer, authentic delighted face, followed by settle.

- Miss: readable but brief disappointment; recover with personality.

- Opponent's good shot: generous social acknowledgment.

- Idle/invitation: a character waiting and thinking, not random perpetual swaying.

Animate eyes/head/torso with purposeful lead and follow, strong readable key poses, anticipation, contact, recovery, secondary motion and controlled holds. Avoid perpetual maximum expression or constant jitter. This pack is not evidence that any of those timings already work.

9. Execution order once the user authorizes implementation

1. Inventory female assets/prefabs, outfit assignments, rig/bind pose, materials, existing facial controls and animation flow. Record current hashes and a short actual-game baseline. Identify shared male assets before touching anything.

2. Create a female-isolated neutral comparison using the existing rig/body. Establish front/back/side/three-quarter views and matched neutral lighting. Preserve gameplay camera, maps, turf, world post-processing and light rigs.

3. Match garment silhouette, fit, thickness and separation before texture work. Then match skin/eye/material response while preserving identity. Build real separate garments, not an offset body surface.

4. Prove the default kit looks bright and appealing at gameplay size. Use side-by-side comparisons, not beauty-camera-only proof.

5. Add/adjust compatible expression and acting controls only within the granted scope. Test expressive range and garment deformation on the same underlying character, with no frozen pose cheats.

6. Show substantial before/after improvement in actual Unity: neutral, idle, rally, golf, and several emotes. Keep no-audio clips for review. Check real device performance before claiming mobile readiness.

7. Record PASS/FAIL with evidence, stage only scoped files, no commits. Stop for a real identity conflict or unapproved structural replacement; routine fitting choices do not require repeated permission.

10. Binary acceptance gates for future implementation

BRIGHT / LIVELY / SOULFUL: PASS only if the muted matched-camera comparison shows clear engagement, emotional contrast and appeal in the simple default kit. Reviewer judgment is required; screenshots or tests alone do not prove soul.

NEUTRAL FIDELITY: same adult identity and body; front/back bald silhouette within the existing approximately 5% authority tolerance where comparable. Report lighting/camera differences before claiming an overlay match.

GARMENT VOLUME: visible independent collar/cuff/neckline/hem/pleat geometry and air gaps; no body-painted fabric, no clipping in all tested motions.

EXPRESSION RANGE: neutral, blink, gaze directions, open/closed jaw, smile, focus and disappointment can be reached and cleanly return to neutral without identity drift.

DEFORMATION: test raised arms, full overhead reach, cross-body reach, racket/club grips, torso twist both ways, squat/lunge, running stride and jump landing. Check shoulder collapse, sleeve/armhole clipping, skirt/liner intersections, hand/prop contact and foot sliding. Do not label the generated sheets animation-ready proof.

MOBILE READABILITY: emotions/weight read around 240px character height without captions; garment form remains legible at the unchanged gameplay camera.

PALETTE: light, dark and saturated selections preserve material quality and saved customization.

PARITY: male hero, body/rig identity, original gameplay behavior, maps, cameras and world lighting remain intact.

PERFORMANCE: actual target-device frame timing and memory evidence; do not substitute editor timings.

PROOF: GATE_RESULTS.md plus real Unity images and muted clips. Generated references are not implementation proof.

11. Known limitations of this pack

These 12 sheets are AI-generated reference images made with the built-in image tool. They are not a mesh, scan, UV layout, topology diagram, calibrated orthographic capture or animation. Fine seams, pleats, sole details and face curvature can vary. They must be reconciled into one consistent model, using the master hierarchy above. Preserve the original expressive ambition while using neutral views to remove construction ambiguity.

Do not mark anything complete just because a static beauty render looks similar. The main goal is a bright, lively, soulful character IN PLAY.
